

Inetz Managed Backup Solutions

Technical Overview

With the proliferation of information in today's business environment, there is a constant need for dependable, scalable storage and data backup solutions. We understand that data is critical to your business, and you need a backup and recovery solution that's robust and cost effective. As your business grows and your requirements change, Inetz can create and extend solutions to meet your storage and backup needs.

Daily automated data backups incrementally store all of your data to disk on a redundant, centralized storage array housed in our secure, state-of-the-art data center. Our automated, consistent backup process protects you from human error, power failures or any number of causes that might lead to data loss.

Complete weekly, monthly & quarterly automated LTO media backups write your full data set from the previous period (the previous week, month, quarter, etc) to encrypted media locked within an enterprise class interchanging media library in our secure data center.

All encrypted backup media is transferred off site via secure courier to Perpetual Storage, Incorporated (PSI). PSI is a world leader in off site storage solutions. Located deep within the rugged Wasatch Mountains, PSI securely deposits your encrypted data within their vault. The vault is cut 200 feet deep into a solid granite mountain. Geological Studies have confirmed that the granite is solid and that the temperature and humidity levels meet or exceed all federal requirements for archival storage. The vault is protected by its unique location from floods, earthquakes, and man-made disasters. In an additional effort to safe-guard your data, PSI does not store paper or flammable media, creating a virtually disaster free environment. Because Inetz is in such close proximity to PSI we can retrieve archived media within one hour of submitting a request. PSI provides their secure courier services 24 hours a day, 365 days a year.
